

Questions to interview panel

- 1. Given the high volume of 14 million search requests daily and the diverse user base, how does the organisation balance performance, scalability, and security while adopting the latest cloud technologies and microservice architectures?**
- 2. What are the key business priorities the architecture team is currently focusing on, and how does the Lead Technical Architect role contribute to shaping and aligning technical solutions with those objectives?**
- 3. This role emphasises team collaboration and challenging established ways of working. Can you provide an example of how the architecture team has successfully implemented a new approach or design that delivered significant value to the organisation?**
